Oxivir® Five 16 Concentrate

Disinfects in 5 minutes, the time of traditional disinfectants.

Oxivir® Five 16 Concentrate is a brand new Hydrogen Peroxide-based broad spectrum hospital-grade disinfectant that disinfects at a ratio of 1:16 and disinfects hard, non-porous surfaces in 5 minutes.**

Oxivir® Five 16 Concentrate kills a wide variety of organisms of concern including Norovirus, Hepatitis B, Hepatitis C, C. difficile spores, Aspergillus and the drug resistant organisms MRSA, MRSE and VRE. When compared to other dilutable disinfectants with 10 minute contact times, this product disinfects in half the time, which means that healthcare professionals can be confident that they are using their disinfectant properly. In addition to its efficacy, Oxivir® Five 16 Concentrate has an excellent environmental profile. It is also essentially non-irritating to eyes and skin at use dilution.

Key Benefits of Oxivir® Five 16 Concentrate

- Dilutable disinfectant with 5 minute contact time increases the likelihood of proper usage.
- Kills Norovirus and C. difficile at standard hospital disinfectant use dilution.
- Regular use helps reduce costs associated with HAIs, including extended hospital stays and treatment.
- Can be used with microfiber cleaning tools.
- Non-corrosive formula is safe on most healthcare hard non-porous surfaces.
- Meets bloodborne pathogen standards for decontaminating blood and body fluids.
- Available in closed loop dispensing for cost control and bulk packaging for mobility/flexibility.

When compared to other dilutable disinfectants with 10 minute contact times, this product disinfects in half the time, which means that healthcare professionals can be confident that they are using their disinfectant properly. In addition to its efficacy, Oxivir® Five 16 Concentrate has an excellent environmental profile. It is also essentially non-irritating to eyes and skin at use dilution.

** Note: not recommended for floors at disinfectant strength (1:16).

Introducing Oxivir® Cleaner Disinfectants

The shortest distance between disinfection and compliance.

Over 1.7 million Healthcare Acquired Infections occur every year.

Cleaning and disinfecting hard surfaces is critical to reducing the incidence of Healthcare Acquired Infections (HAIs). HAIs are a growing problem in North America with over 1.7 million occurring every year, resulting in 99,000 deaths and costing the healthcare industry over $20 billion. One person dies every six minutes from an HAI (The Division of Healthcare Quality Promotion [DHQP], 2010). Government regulators and insurers are looking more closely at healthcare infections and making reimbursement decisions, which affect a facility’s bottom line, based on whether the infection was contracted while a patient was at the facility. The challenge for a healthcare facility is to adopt an environmental sanitation program—including products, protocols (processes/equipment)—that ensures compliance in an increasingly complex, fast-paced environment.

HAIs are a growing problem in North America with over 1.7 million occurring every year, resulting in 99,000 deaths and costing the healthcare industry over $20 billion.

A key part of an effective environmental sanitation program is disinfection. Other disinfectants may fall short in one of the four key areas: cleaning ability, surface safety or environmental concerns. AHP® technology, which uses hydrogen peroxide as its active ingredient, was developed to meet concerns in these four key areas.

AHP technology is a patented technology that is a synergistic blend of commonly used cleaning ingredients and hydrogen peroxide, which provides better cleaning on hard surfaces. For example, Oxivir® Tb, contains 0.5% hydrogen peroxide and needs only 1 minute to kill Poliovirus Type 1*. Staff and Patient Friendly The comfort, safety and well being of staff and patients is always a concern. Oxivir cleaner disinfectants are developed with this in mind. At use dilution, the HMIS ratings are all zero’s. AHP and Design® are registered trademarks of Virox Technologies used under license.

AHP technology is a patented technology that is a synergistic blend of commonly used cleaning ingredients and hydrogen peroxide, which provides better cleaning on hard surfaces.

2. Meets bloodborne pathogen standards for decontaminating blood and body fluids.
3. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most hard surfaces.
4. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.
5. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.
6. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.
7. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.
8. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.
9. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.
10. Non-corrosive – At dilution, these formulas are non-corrosive formula is safe on most healthcare hard, non-porous surfaces.

For sale in the U.S.A. and Canada. Health Canada DIN No. 02283522 (Liquid); Health Canada DIN No. 01815605 (Concentrate)
